

25%K₂O 50%SiO₂ 3% H₄SiO₄
Liquid Foliar Fertiliser

Soluble silicon uses: can help to protect from natural stresses, pathogenic fungi & sucking pests, by the simple action of improving cell strength.

Plant deficiency symptoms: sluggish growth, drooping leaves, wilt, pest infestation, fungi formation, poor root growth & low glucose levels.

Spray on: most plant species including vegetables, herbs, vines, cereals & fruit trees. **Rate: 2 litres to 100 litres of water during evening or morning dew, when spraying direct to leaf, avoid leaf damage from high pressure applications. Can be used through trickle irrigation at 1kg per hectare watered.**

Application time: first signs of stress, fungi infestation & insect attack. Apply as directed as heavy doses can burn, apply every 14 days during vulnerable period, 4 weeks before fruiting and during fruit set for extra protection, wash fruit before eating, re-apply after heavy rain or overhead irrigation.
